

Md. Meheraj Hossain

Dhaka, Bangladesh Phone: +880 1684251757 meherajhossainmahir@gmail.com

LinkedIn: md-meheraj-hossain GitHub: mhstyles7

Professional Summary

Computer Science and Engineering graduate specializing in full-stack development, applied machine learning, and cybersecurity research. Built and deployed production-grade web platforms using the MERN stack, and authored first-author research on AI-driven zero-day intrusion detection accepted for publication in ICT Express (Elsevier, IF: 4.2). Combines hands-on engineering experience across web, IoT, and intelligent systems with a proven ability to deliver end-to-end solutions independently. Open to software engineering, machine learning, and technology-focused roles in the computing and engineering domain.

Education

Bachelor of Science in Computer Science & Engineering BRAC University, Bangladesh	2021–2026 CGPA: 3.61/4.00
Higher Secondary Certificate (HSC) Mirpur Cantonment Public School & College, Bangladesh	2018–2020 GPA: 5.00/5.00
Secondary School Certificate (SSC) Greenview High School and College, Bangladesh	2016–2018 GPA: 5.00/5.00

Technical Skills

Languages: Python, JavaScript, C, SQL

Web: MERN Stack, REST APIs, JWT Authentication, MVC Architecture

ML/AI: TensorFlow, PyTorch, Scikit-learn, Gemini API

Tools & Deployment: Git, Linux, Postman, Wireshark, MySQL, Vercel, Render

Projects

PothChola – Localized Smart Travel and Cultural Discovery Platform *Dec 2025 – Feb 2026*

Live: poth-chola.vercel.app · GitHub: mhstyles7/PothChola

- Owned full MongoDB schema design and entire React frontend in a team-built MERN platform; built post/comment/reaction system, friend requests, and group tour planning with shared itineraries.
- Integrated Gemini API for personalized trip recommendations and navigation assistance; implemented Google Sign-In API for auth. Frontend on Vercel, backend on Render.

Trippy 2.0 – Travel Social Media & Tour Management System *Apr 2026 – May 2026*

Solo Project · Live: trippy-2-0.vercel.app · GitHub: mhstyles7/Trippy-2.0

- Rebuilt and refactored an incomplete team project solo; restructured MERN architecture, replaced broken features, and extended platform functionality end-to-end.
- Implemented JWT-based auth with OCR-powered NID verification, role-based marketplace separating traveler and provider dashboards, and VoiceFlow chatbot integration.

Air Quality Monitoring System (ESP32-Based IoT) *Dec 2025 – Jan 2026*

- Built real-time air quality monitor using ESP32, MQ gas sensors, and DHT11 with automated MOSFET-based exhaust control.
- Enabled Wi-Fi cloud data transmission and local alert mechanisms for threshold-based responses.

Research

A Cross-Dataset based Zero-Day Intrusion Detection System by Integrating Siamese Network and Reinforcement Learning

First Author · Accepted in *ICT Express* (Elsevier, CiteScore: 10.8, IF: 4.2)

- Led conceptualization, methodology design, and overall project direction; supervised end-to-end research execution.
- Applied Siamese neural similarity learning and reinforcement learning (PPO/DQN/SAC) for adaptive zero-day threat detection across heterogeneous IoT datasets.

Additional Experience

Social Media Manager – Bangladesh Freight Forwarders Association (BAFFA) *Feb 2024 – Jul 2024*

- Managed Facebook content strategy for a senior executive holding five concurrent leadership roles across international freight, logistics, and trade associations; grew and maintained a page with over 68,000 followers.
- Developed and scheduled thought leadership content covering BAFFA initiatives, international trade developments, and industry insights; monitored engagement metrics and aligned communications with organizational objectives.
