

Md. Meheraj Hossain

Dhaka, Bangladesh Phone: 01684251757 meherajhossainmahir@gmail.com

LinkedIn: md-meheraj-hossain GitHub: mhstyles7

Professional Summary

Computer Science graduate with strong foundation in full-stack development, backend systems, and applied machine learning. Experienced in building scalable web applications using MERN stack, designing RESTful APIs, and integrating intelligent system logic. Seeking software engineering or backend development internship opportunities.

Education

Bachelor of Science in Computer Science & Engineering

2021–2026

BRAC University, Bangladesh

CGPA: 3.61

Technical Skills

Languages: Python, JavaScript, C, SQL

Web: MERN Stack, REST APIs, JWT Authentication, MVC Architecture

ML/AI: TensorFlow, PyTorch, Scikit-learn, Gemini API

Tools & Deployment: Git, Linux, Postman, Wireshark, MySQL, Vercel, Render

Projects

PothChola – Localized Smart Travel and Cultural Discovery Platform

Live: poth-chola.vercel.app · GitHub: mhstyles7/PothChola

- Owned full MongoDB schema design and entire React frontend in a team-built MERN platform; built post/comment/reaction system, friend requests, and group tour planning with shared itineraries.
- Integrated Gemini API for personalized trip recommendations and navigation assistance; implemented Google Sign-In API for auth. Frontend on Vercel, backend on Render.

Trippy 2.0 – Travel Social Media & Tour Management System

GitHub: mhstyles7/Trippy-2.0

- Rebuilt and refactored an incomplete team project solo; restructured MERN architecture, replaced broken features, and extended platform functionality end-to-end.
- Implemented JWT-based auth with OCR-powered NID verification, role-based marketplace separating traveler and provider dashboards, and VoiceFlow chatbot integration.

Air Quality Monitoring System (ESP32-Based IoT)

- Built real-time air quality monitor using ESP32, MQ gas sensors, and DHT11 with automated MOSFET-based exhaust control.
- Enabled Wi-Fi cloud data transmission and local alert mechanisms for threshold-based responses.

Research

Undergraduate Thesis — *A Cross-Dataset based Zero-Day Intrusion Detection System by Integrating Siamese Network and Reinforcement Learning*

First Author · Submitted to *ICT Express* (Elsevier, CiteScore: 10.8, IF: 4.2) — **Under Review**

- Led conceptualization, methodology design, and overall project direction; supervised end-to-end research execution.
- Applied Siamese neural similarity learning and reinforcement learning (PPO/DQN/SAC) for adaptive zero-day threat detection across heterogeneous IoT datasets.

Extracurricular

Social Media Manager – Bangladesh Freight Forwarders Association (BAFFA)

6 Months

- Managed digital content strategy and communications for executive leadership; coordinated stakeholder engagement campaigns.
